

Biodiesel by Rail

If you always wished you could reap the benefits of rail but didn't know how — or want to use rail to reach markets you don't currently serve today — Union Pacific Distribution Services (UPDS) can help. Regardless of whether you or your customers have tracks at your door, UPDS knows how to combine the economics of long-haul rail service with the flexibility of over-the-road movements so you can ship products farther, more affordably.

With an extensive network of liquid bulk transload facilities with pumps, your products move seamlessly from train to truck and from truck to train for distribution throughout North America. Our network of transload facilities handles biodiesel, transferring it by pressurized pumps.

UPDS bundles rail, transloading and truck delivery so you can access the benefits of rail without any additional hassle. Our experts will tailor a solution to your needs and coordinate with all parties involved, while you handle just a single invoice.

As a UPDS customer, you can:

- Increase your selling and growth opportunities
- Gain access to our liquid bulk transloaders
- Leverage the economies of rail
- Simplify billing with a single invoice for multiple modes of transportation
- Make doing business even easier
- Benefit your bottom line
